Same grade as used in the Engine

Same grade as used in the Engine

Whenever possible the "Agricultural" grades of lubricant should be used; the corresponding "Car" grades are shown as alternatives when they are not obtainable. If neither of these grades are available, good quality oil corresponding to the S.A.E. numbers may be used.

This bulletin is re-issued to incorporate the change in nomenclature of Price's Lubricants, effective from March 1st, 1949.

This sheet replaces that already in your file which bears the SAME bulletin and sheet numbers, but of a LOWER issue number. The old copy should be removed and destroyed.
